The above includes all unique bonded wineries licensed by the TTB; additional bonded production or storage locations under the same management are not considered as unique wineries and are not included in the counts. A Virtual Winery has a unique physical location (that may be another entity's winery), produces at least one brand (may have multiple brands and/or produce for others) and has its own winemaker and management (may share either of these with another entity). WBM winery count excludes bonded facilities which produce primarily mead and non-grape wines.
